

Devangsinh Gohil

MSc AI Student | Research-Oriented AI / Deep Learning Engineer

Email: devanggohil70@gmail.com | Phone: +33 7 43 64 72 56 | GitHub: Devangsinh84

LinkedIn: [Devangsinh Gohil](#) Location: Paris, France

Professional Summary

MSc AI student and experienced Software Engineer specializing in deep learning and generative models, with a focus on applying experimental AI systems to complex scientific and biological domains.

Education

École d'Ingénieurs ECE PARIS

Expected Graduation: June 2026

MSC AI – M2

Key Coursework:

Implemented RAG pipelines and prompt-based LLM applications as part of MSc AI coursework, Built and evaluated ML models using scikit-learn and PyTorch for supervised learning tasks

Sardar Vallabhbhai Patel Institute Of Technology, Vasad

Graduation date: Jul. 2023

B.E. in Information Technology

CGPA: 8.71/10

Experience

INJALA : A Fintech Company | Software Engineer I

Aug. 2023 – Aug 2025

- Developed and optimized key modules (Agent Portal, Carrier Portal) within the Kinetic Insurance platform, improving user experience and system scalability.
- Collaborated with cross-functional teams (product, QA, and design) to build responsive and efficient web applications using ASP.NET Core, JavaScript, and SQL.
- Developed and maintained server-rendered UI for internal and customer-facing dashboards.
- Mentored interns on architecture and code quality, fostering a collaborative learning environment.

INJALA : A Fintech Company | Software Engineer Intern

Jan. 2023 – July 2023

- Gained hands-on experience in full-stack development using .NET Core, C#, JavaScript, SQL, and API integrations.
- Assisted in debugging, feature enhancement, and QA, ensuring smooth product releases.
- Actively participated in agile processes—daily stand-ups, code reviews, and sprint planning—to learn clean coding and teamwork practices.

Skills

Programming & Backend: C#, ASP.NET Core/ Razor Views, REST APIs, MVC, Python (APIs, data processing)

Frontend: JavaScript, jQuery, React.js, HTML5, CSS3

AI & Machine Learning: Python, Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch (model development experimentation), Generative AI, LLMs, Diffusion Models, Computer Vision, RL techniques (reward shaping, policy optimization, RLHF)

Databases: Microsoft SQL Server, MySQL, Firebase

Tools & Cloud: Azure DevOps, Docker, FastAPI, n8n, Git, CI/CD, Agile/Scrum, Postman

Soft Skills: Team collaboration, mentoring, problem-solving, continuous learning

Projects

Kinetic Insurance Software .NET Core, C#, JavaScript, jQuery, SQL, Email Services, PDF services, IronPDF, amCharts

- Designed and implemented Kinetic, an all-in-one insurance management solution that consolidates policy management into a single platform.
- Built full-stack features using C, ASP.NET MVC, Razor views, REST APIs, and SQL databases.

Carrier Portal

.NET Core, C#, JavaScript, jQuery, SQL, Email Services

- Developed a carrier portal for insurance carriers to handle quote submissions, reviews, and rejections.
- Improved efficiency in managing insurance quotes and carrier interactions.

Scalable RAG Handbook Generator

Python, LangChain, ChromaDB, Mistral API

- Engineered a local RAG pipeline with LangChain and ChromaDB for zero-latency PDF semantic search.
- Implemented batch-processing via Mistral API to bypass LLM limits, generating structured 20,000+ word handbooks.

Autonomous Agent Control (Reinforcement Learning)

JPython, OpenAI Gym, NumPy

- Engineered a Reinforcement Learning agent using Q-Learning to solve stochastic navigation tasks (FrozenLake), optimizing reward policies and hyper-parameters to achieve stable convergence in dynamic environments.
