Location: Paris, France | **Open to relocation:** France & Europe | **Availability:** Immediate

Professional Summary

Software engineer with nearly 3 years of experience (incl. internship) building and maintaining a multi-customer insurance SaaS platform in production at a fintech (C#, ASP.NET Core, SQL Server, PostgreSQL, React), completing an MSc in Artificial Intelligence at ECE Paris. Brings Generative AI into software: RAG pipelines, LLM applications and AI agents (LangChain, Azure OpenAI, Mistral, MCP), exposed through REST APIs and microservices, with automated tests, code reviews and CI/CD. Works directly with customers to turn requirements into reliable features.

Education

École d'Ingénieurs ECE PARIS – MSc in Artificial Intelligence (M2) Expected graduation: 2026
Coursework: Generative AI, LLMs, Diffusion Models, Computer Vision, Reinforcement Learning, Distributed Systems, Cloud Computing, AI for Automation.

Sardar Vallabhbhai Patel Institute of Technology (GTU), Vasad Graduation date: Jul. 2023
Bachelor of Engineering (B.E.) in Information Technology ***CGPA: 8.71/10***

Experience

INJALA : A Fintech Company | Software Engineer Aug. 2023 – Jul. 2025

- Developed and maintained key modules (Agent Portal, Carrier Portal) of Kinetic, a multi-customer insurance SaaS platform in production, with C#, ASP.NET Core / MVC, Entity Framework, SQL Server, PostgreSQL and React.
- Defined the strategy for a large product migration (data + code) and finalised the database design for new features.
- Cut an automated business process from 30 minutes to 2 minutes; optimised SQL queries, indexes and procedures.
- Gathered requirements in direct customer calls and turned them into specifications, REST APIs and integrations.
- Code reviews with PR approval authority, security reviews, CI/CD on Azure DevOps and L2/L3 production support.
- Mentored 3 junior engineers (2 became engineers at Injala); ran internal workshops on Entity Framework/LINQ.

INJALA : A Fintech Company | Software Engineer Intern Jan. 2023 – Jul. 2023

- Built full-stack features with .NET Core, C#, JavaScript and SQL; fixed production issues and supported QA and releases in an Agile/Scrum team.

Skills

Backend: C#, .NET Framework / .NET Core (up to .NET 10), ASP.NET Core / MVC, Entity Framework, LINQ, Python, FastAPI, REST APIs, gRPC, microservices, RabbitMQ
Generative AI & ML: LLMs (Azure OpenAI, OpenAI, Mistral, Ollama), RAG (LangChain, FAISS, ChromaDB), AI agents, MCP, n8n, prompt engineering, PyTorch, TensorFlow, scikit-learn, SHAP, computer vision (OpenCV, CNN)
Frontend: React.js, TypeScript, JavaScript, Angular, Next.js
Databases: Microsoft SQL Server / Azure SQL, PostgreSQL, MySQL, MongoDB
Cloud & DevOps: Azure (App Services, Key Vault, Azure OpenAI), AWS, Docker, Azure DevOps CI/CD, GitHub Actions, Git, Linux
Practices: automated testing (xUnit, pytest), code reviews, design patterns (DI, Repository / Unit of Work), Agile/Scrum, technical documentation
Certification & Languages: Databricks Fundamentals · English (fluent)

Projects

Explainable AI Trading Platform (MSc thesis) Python, PPO, SHAP, .NET 10, React

- Three microservices: a Python deep RL engine (PPO, XGBoost baseline, SHAP) evaluated on real S&P 500 returns with transaction costs, a .NET 10 ASP.NET Core orchestration API and a React dashboard; pytest/xUnit tests, CI.

Edge Risk – GenAI Project Intelligence Python, FastAPI, LLM, React, Docker

- Turns PDF status reports into structured LLM risk analysis (JSON), a threat matrix and document-grounded chat.

Real-Time Worker Fatigue Detection Python, TensorFlow, OpenCV, MediaPipe, React

- Webcam monitoring with facial landmarks, Eye Aspect Ratio and a CNN (98.5% test accuracy), served by FastAPI.
