Devangsinh Gohil

Full-Stack Software Engineer | Python, React & LLM Applications

Email: devanggohil70@gmail.com | **Phone:** +33 7 43 64 72 56 | **GitHub:** github.com/Devangsinh84 | **LinkedIn:** Devangsinh Gohil
Location: Paris, France | **Open to relocation:** France & Europe

Professional Summary

Full-stack software engineer with 2+ years of production experience, completing an MSc in AI (ECE Paris). Builds and ships web platforms and LLM/RAG applications with Python (FastAPI), React, MongoDB and Docker, deployed on Linux (Ubuntu) and AWS, with CI/CD and code-review practices from a team environment. Experienced with local/on-prem LLMs (Ollama) and AI-assisted development (Claude Code), validating generated code before it ships. Motivated by delivering secure, reliable AI in real client environments.

Education

École d'Ingénieurs ECE PARIS – MSc AI (M2) Expected graduation: 2026

Coursework: Generative AI, LLMs, Distributed Systems, Cloud Computing. Implemented RAG pipelines and prompt-based LLM applications; built and evaluated ML models with scikit-learn and PyTorch. MSc thesis in progress.

Sardar Vallabhbhai Patel Institute Of Technology, Vasad Graduation date: Jul. 2023

B.E. in Information Technology ***CGPA: 8.71/10***

Experience

INJALA : A Fintech Company | Software Engineer I Aug. 2023 – Aug 2025

- Developed and optimized key modules (Agent Portal, Carrier Portal) of the Kinetic Insurance platform used in production, improving user experience and scalability.
- Worked with product, QA and design teams to deliver responsive web applications and REST APIs with ASP.NET Core, JavaScript and SQL, and supported releases through CI/CD pipelines on Azure DevOps.
- Took part in code reviews and mentored interns on architecture and code quality.

INJALA : A Fintech Company | Software Engineer Intern Jan. 2023 – July 2023

- Built full-stack features with .NET Core, C#, JavaScript, SQL and API integrations; helped with debugging, QA and smooth product releases.
- Practised agile delivery: daily stand-ups, code reviews and sprint planning.

Skills

Backend: Python, FastAPI, REST APIs, C#, ASP.NET Core / MVC, Razor Views
Frontend: React.js, JavaScript, jQuery, HTML5, CSS3
AI & LLM: LLMs, RAG pipelines (LangChain, ChromaDB, FAISS), local LLMs (Ollama, on-prem inference), Generative AI, prompt engineering, n8n workflows, PyTorch, TensorFlow, scikit-learn, Pandas, NumPy, Reinforcement Learning (Q-Learning)
DevOps & Cloud: Docker, containerization, CI/CD (Azure DevOps), AWS (EC2, S3), Linux (Ubuntu), Git, Postman, Agile/Scrum, code reviews
Databases: MongoDB, Firebase, Microsoft SQL Server, MySQL
AI-Assisted Dev: Claude Code, Cursor, with critical review and testing of generated code
Languages: English (fluent)

Projects

Scalable RAG Handbook Generator Python, LangChain, ChromaDB, Ollama, Mistral API

- Built a RAG pipeline with LangChain, a local ChromaDB vector store and local LLMs served with Ollama for low-latency, on-prem semantic search over PDF documents.
- Implemented batch processing through the Mistral API to work within LLM context limits, generating structured handbooks of 20,000+ words.

Intelligent Document Insight Engine (RAG Pipeline) Python, LangChain, OpenAI, FAISS, Docker

- Built a RAG pipeline with LangChain and FAISS, containerized with Docker, for sub-second semantic search.
- Optimized context retrieval with recursive text splitting to improve answer accuracy and reduce hallucinations.

Autonomous Agent Control (Reinforcement Learning) Python, OpenAI Gym, NumPy

- Built a Q-Learning agent for stochastic navigation (FrozenLake), tuning reward policy and hyper-parameters to reach stable convergence.

Kinetic Insurance Software .NET Core, C#, JavaScript, SQL, IronPDF

- Designed and implemented Kinetic, an all-in-one insurance management platform consolidating policy management, with full-stack features in C#, ASP.NET MVC, REST APIs and SQL.

Carrier Portal .NET Core, C#, JavaScript, SQL, MongoDB

- Developed a portal for insurance carriers to handle quote submissions, reviews and rejections. Used MongoDB alongside SQL for data storage.
